    Just verified via Win2000 sp3 and .net sdk 1.0 sp1 that .net SDK/Slammer patch
    installs with no problems.
    Now, hfnetchk reports all patchs A−OK :−)
    However, another problem associated with this patch seems to have cropped up:
     − installed the patch below as admin
     − now, logged in as a power user, the system tray SQL Server Service
    Manager is inactive (perviously, it had a red block, indicating that it was
    turned off, which I could turn on, as power user).
    Now, after current patch, it is completely inaccessible, and looks like this (small embedded

    Previously, I could enable or disable SQL for .net SDK through this tray−icon.
    Logged in as admin, it looks normal  with:
     Server:  <computername>\NETSDK    Service:  SQLServer
    Any ideas?
    Thanks,
     − Mitch
