Rich Stevens was a really great guy. In 1982 when I was just still in grad school and starting out he worked here in New Haven on the ground floor of the same office building (Sigma Xi) as I, though for a different company (Puter Associates).

I went to him for help in understanding how pointers to functions worked in C and he selflessly spent a great deal of time helping me to master the concept.

At the time I had no idea of how famous he was nor would become. I read later that he later moved back to the southwest where he preferred to live and work.
