Hi everyone

Im new to the list and apologize if this question being asked before.
I read through 2003 archives and couldnt find anything similar.

Our company uses a PIX 515 with 3 legs, OUTSIDE, DMZ and INSIDE
We have users doing VPN tunnels from their homes with Cisco VPN client 4 and terminating the tunnels at the PIX. This works great.
But we cant create tunnels from INSIDE and terminating at other customers endpoints. The tunnels are easily created if we work outside our PIX.
The PIX 515 do PAT for all INSIDE connections using outside interface IP.
Is there any hooks when doing VPN over PAT with Cisco clients ?

regards

Marko Kupiainen
