I would suggest using Squid if you are okay with Linux.

Mike C.

Subject: Router Internet Monitoring

This may be a bit offtopic, if so please excuse me. I am looking for a solution to monitor the live traffic (i.e. incoming/outgoing traffic, incl.

able to determine what url the user is going to) on our Cisco 2620.

Freeware

would be great, linux solution is ok. I don't want to use a network capture

utility such as sniffer, fluke or iris. Pix has the device manager which comes in handy. I can enable logging via SNMP, but it is text based, a GUI

utility that will sort that information would be very cool.

Thank You,
George Peek
