I have a 501 v. 6.3(1). I am attempting to establish a PPTP VPN server (192.168.1.10) behind the firewall. I lose Internet connectivity once I apply the translation rules. I do not have an electronic copy available, but here is a quick synopsis of the pertinent entires.

fixup protocol pptp 1723

access-list outside\_access\_in permit gre any host 192.168.1.10

access-list outside\_access\_in permit tcp eq pptp host 192.168.1.10 eq pptp

access-list outside\_access\_in permit icmp any any echo-reply

ip address outside xxx.xxx.xxx.xxx 255.255.255.0

ip address inside 192.168.1.1 255.255.255.0

nat (inside) 1 0.0.0.0 0.0.0.0 0

static (inside,outside) 192.168.1.10 192.168.1.10 netmask 255.255.255.255 0 0

access-group outside\_access\_in in interface outside

What am I missing here?

Geoff
