Here's what I do:

create a separate access-list for each set of vpn interesting traffic used in the crypto map.

create a "nonat" access-list that includes all the lines from all of the above access lists and use it for your "nat (inside) 0 access-list nonat" command.

HTH.

Josh

Subject: [fw-wiz] Pix vpns nat

Hi all again,

i have allready figure out how to create several vpns, but now im facing another problem. I need obviously different access lists for each vpn, but if i try to create a new "nat (inside) o access-list X" the actual entry on the config got replaced with the new one. Do you know how to create several ?? Should i include the new access-list into the existig one ??

Tia

Cheers
