This question is somewhat related but, on a different scale. I was reading "CCSP Self-Study: Cisco Secure PIX Firewall Advanced (CSPFA) 2nd ed." and found this under "FWSM and PIX Firewall Feature Comparison" (P792):

"Virtual private network (VPN) functionality (IPSec, Point-to-Point Tunneling Protocol [PPTP] and Layer 2 Tunneling Protocol [L2TP]) packets flowing across the firewall is not supported."

I questioned a Cisco SE about it prior to our implementation of the FWSM and he claimed that it was only for management of another PIX through the FWSM. This morning after last Friday's implementation someone complained about not being able to do PPTP in through the FWSM.

Anyone have any experience trying to get RAS VPN tunnels through a Cisco FWSM?

Thanks,
