Folks,

Trying to use a sunpass edu thing for work, I have taken sun's advanced networking class for solaris 9. We've touched and played with IPv6 in the class, and a few questions have popped up that perhaps some of the IPv6 experts here might answer;

1. how are firewalls going to deal with IPv6 addressing? Or, will IPv6 negate the need for firewalling and push everything into encryption boundaries?
2. icmp redirects, are they still a danger in the IPv6 realm such as they were and are in traditional TCP/IP?

Thanks,

Ron DuFresne
