- 

Dear guru,

I need to pass the IT audit requirements(e.g.SOX), scanning our public server (web,ftp..) thru our CP firewall.

1. What tools we should use? (Nessus, Internet Scanner)
2. Would the penetration test/VA scanning be successful thru fw?
2. Is there any add'l ports need to be opened?

Please help,  
Thanks,  
Nick
