Oliver,

Either I am misinterpreting your needs, or what you are asking for is pretty straightforward.

<snip correct summary>

Looks like something any box can do, including PIX.

That's good news – I've only ever used either pf under OpenBSD (which can do anything) or more domestic routers (which can do nothing). I just wasn't sure which category the PIX (and other more professional firewalls) fell into.

Thanks for your advice,

Oliver.
