Subject: [fw-wiz] user authentication filed

we have windows2003 doamin and pix506E.
tried to use vpn client and get connection terminated locally and user

authentication > > failed error.

it keeps asking for user name and password.

Windows servers don't do RADIUS authentication out of the box. I apologize if this was implied in your original post, but have you configured IAS on your Windows server and verified that the shared secret is correct? Note that IAS has specific settings for Cisco RADIUS clients.
