Hi All.

What's the recommended way to maintain a list of public, open http proxies and block them from making inbound connections to an http server with iptables?

I have linblock <http://www.dessent.net/linblock/> which I use for a few other lists. Is there a regularly updated list out there for open http proxies that can be used for this purpose?

I'm hoping I can retrieve a text file with the IP's every day with a cron job and let linblock update an IPTables chain. Perhaps there's a better way?

csmith
