one might note on that, that this is no proper practice, it simply does no good regarding proper network operation. imagine, there are people out there who operate networks with more than 20 routers -- if you deploy those filter you probably do not make new friends, especially in the isp field.

that said, a better choice would be putting

```
/sbin/shutdown -p now
```

in /etc/rc.local

grin

have a nice one

/k
