Once again I make me look like a fool..

I'm quite new to both mailinglists and FreeBSD so I'm not sure IF i should post this or where I should post if.. sorry for pissing you off..

Well, for some month ago I saw the warnings about the root exploit for OpenSSH here. What I never understood what, why should I update my world because of an OpenSSH exploit? Isn't it enough to just cvsup the ports and re-install OpenSSH from the ports?
