Yup. Whenever critical (security) changes are committed.

>of mods since that release?

The current state of RELENG_4_5 is 4.5-RELEASE-p2. That basically means there have been 2 changes to RELENG_4_5 since 4.5-RELEASE came to be. As soon as another commit is made, it will be known as 4.5-RELEASE-p3. You simply synchronize to RELENG_4_5 and get the most current -px state.

/usr/src/UPDATING documents the changes made, once you cvsup your sources.
