I just got back from a vacation today. I had an email from my security officer saying that he was able to use an exploit to get root, and that he patched it (took suid off that file). I goto su, and i get this:

```
patrick@apollo:~$ su
```

```
s/key 95 snosoft2
```

```
Password:
```

I asked him about it, he doesnt know why thats happening.

Any ideas?

Patrick Fish
