This is not all that surprising
The behavior you are talking about, blocking entire isp's and blocks of
ips, is the same as the other service you mentioned earlier, SPEWS.

SPEWS has blocked 2 entire c-classes at my isp, preventing my company
from sending mail to many large email sites, like mail.com and others.

When I enquired about having the block removed, or made more specific to
block the spammers, but not block my /28, I was told to go to hell.

I think you are in the same situation.

[This is a resend. Ironically, the original was blocked by FreeBSD's spam
filter, I've had to send this from another account]
