Folks,

please take a look at the following emails...these were rejected from FreeBSD-security due to a policy of restricting to only those subscribed to the list at the address subscribed to the list. while well-intentioned, this policy has unintended results.

i have removed the restriction. please contact me at postmaster@freebsd.org if you wish to discuss the matter....i am open to your responses.

Hi there!

I just wanted yo make you aware that there is a patch for krb5 telnet from bg@sics.se available at <http://www.freebsd.org/cgi/query-pr.cgi?pr=bin/45397>. With this patch telnet no longer dumps core and it uses subkeys properly.

FreeBSD-Security: removing restriction on who can send email to freebsd-security

It'd be nice to have krb5 telnet work out of the box
in FreeBSD; it's been broken for quite some time now :(

Happy hacking!

-Richard

What evidence do you have that this is true?

Kris
