Hi all,

I have been trying to get SMTP AUTH working in a hosting setup which I manage. Tonight I succeeded. In the course of so doing I've come up with a few patches which seem to work well for me.

Please see: <http://people.freebsd.org/~bms/cyrus-sasl-improvements.diff>

The features are: improved debugging messages, optional use of an SSL transport, and the ability to use MD5 hashes with MySQL or other auxprop plugins.

Credit is due to Branko GrÄnar <[branko@noviforum.si](mailto:branko@noviforum.si)> for the last two features. I have tidied there to make a cleaner diff for 2.1.15.

At the moment this is a diff which can be applied to the cyrus-sasl2 port. If there's further interest I'll roll the patches into the port itself with toggle switches.

BMS
