To: freebsd-security@freebsd.org

I just want to clarify...

```
# $FreeBSD: ports/ftp/proftpd/Makefile,v 1.56 2003/09/23 18:42:43 mharo Exp $  
#
```

```
PORTNAME= proftpd
```

```
PORTVERSION= 1.2.8
```

```
PORTREVISION= 1
```

Is that the updated port that fixes vulnerability? It's 1.2.8 still, but I think this is the patched version, since rcsID shows 9/23 which is yesterday.

Thanks,

-hc
