Hi all.

I didn't find any thread discussing it, sorry if I am re-posting the same subject.

Is there a way to check the ipfilter/ipfw out-flow with bridge? Is it implemented?

I've heard its not done due a performance issue (it's written in ipf-howto), but performance is not the main goal for me in this single situation. I would like to have the stateful firewall and the bridge fully working together.

Best regards,
