To: freebsd-security@freebsd.org

Problem solved.

Here's the answer (for the archives)

```
# block all SMTP traffic from inside to out while letting the server
# through
ipfw add allow tcp from any to me 25
ipfw add allow tcp from me to any 25
ipfw add deny tcp from any to any dst-port 25
```

This prevents any host within the network from sending directly to an SMTP server outside the network.

Thanks to "D J Hawkey Jr <hawkeyd@visi.com>" for helping me out with this.

Cheers

Tim
