Howdie,

Is there a way to get the default BSD 5.3 openssh to compile against the MIT kerberos libraries? I have set NO_KERBEROS=yes in /etc/make.conf so that the heimdal kerberos is not built, and rebuilt world, then installed /usr/ports/security/krb5 and rebuilt world again. sshd is however not being built against MIT at all.

```
[root@foobar] ~ # ldd /usr/sbin/sshd
```

```
/usr/sbin/sshd:
```

```
libssh.so.2 => /usr/lib/libssh.so.2 (0x28098000)
libutil.so.4 => /lib/libutil.so.4 (0x280c7000)
libz.so.2 => /lib/libz.so.2 (0x280d3000)
libwrap.so.3 => /usr/lib/libwrap.so.3 (0x280e3000)
libpam.so.2 => /usr/lib/libpam.so.2 (0x280eb000)
libcrypto.so.3 => /lib/libcrypto.so.3 (0x280f2000)
libcrypt.so.2 => /lib/libcrypt.so.2 (0x281e7000)
libc.so.5 => /lib/libc.so.5 (0x281ff000)
```

Thanks
