Hello Everyone,

I have made a few small changes to the VuXML.org web sites,

<http://www.vuxml.org/freebsd/> (aka vuxml.freebsd.org)

and <http://www.vuxml.org/openbsd/>

- Date-oriented indices (e.g. entry date index) visually group entries from the same date.
- The package name index is more useful, listing individual package names.
- Each package referenced in VuXML now has its own index page linked from the package name page, e.g. [pkg-squid.html](#). The index page lists all entries affecting that package. In the case of FreeBSD, a link to FreshPorts.org is also displayed.
- For entries which contain a CVE name reference, one may "hover" the mouse over the CVE name to get a pop-up description of the CVE as provided by MITRE.
- Each CVE name referenced in VuXML now has its own index page, e.g. [cveitem-2004-1308.html](#) and [cveitem-2000-0442.html](#). Those pages contents are generated directly from MITRE's CVE list.

Cheers,

--
