Dear all,

I am running IPSEC and l2tpd in FreeBSD 4.9.

I am able to connect from WindowsXP to this FreeBSD box . I am also able to ping the Hosts behind the IPSEC gateway, connect to internal ftp servers, browse intranet websites etc.

However I am not able to browse network shares (windows and samba both). It does prompts for Username/password when we try to access directly , but it will never show the network shares.

If I connect to a linux IPSEC gateway using rp-l2tp there is no problem.

/usr/local/etc/l2tp/l2tpd.conf

```
=====
[global]
port = 1701

[lns default]
ip range = 192.168.0.129 – 192.168.0.254
local ip = 192.168.0.2
hostname = freebsdipsec
name = freebsdipsec
ppp debug = yes
pppoptfile = /usr/local/etc/l2tp/options.l2tpd
=====
/usr/local/etc/l2tp/options.l2tpd
=====
noauth
proxyarp
lcp-echo-interval 30
lcp-echo-failure 6
ms-dns 192.168.0.3
ms-dns 192.168.0.4
ms-wins 192.168.0.6
crtsets
```

FreeBSD-Security: IPSEC I2tpd and Windows shares problem

idle 1800
mtu 1400
mru 1400
lock
nodetach
debug

=====

Note: the IP address of the Private Interface is 192.168.0.1/24
