Please be aware of 2 exploits currently running wild, one of which is cross platform and verified as running on BSD, here is a 1.0.2 crossplatforming code PoC i found in a search ->

<http://www.milw0rm.com/id.php?id=943>

There is 'newer' code and PoC of this (k-otik.com, other publics), however it is not mentioned as it is not 100% verified as cross platforming yet.

I recommend people keep speedy with browser updating, Mozilla is not as solid as it once was.

I hope this can help anyone out there, it was brought to my attention by a colleague who was plagued with this all week last week.

Regards,
