Hi,

I am trying to setup ipsec tunnel between Freebsd (host1) and Linux (host2) systems. And I also interested in executing some ipsec test cases(Like TAHI conformance test suite) on the same connection. Please, suggest me some details regarding this setup and Specify any materials which can be obtained from any locations(site)..

I have enabled IPSec support for FreeBSD (4.11 Release) and Linux (kernel–2.4.20–8), now I am trying to establish ipsec tunnel between these two systems. so specify the what further procedure can be done to establish the secure tunnel.

Please help me to enable the connection...Any sort of suggestion will be appreciated .

Thanx,

with regards,
Mohan.
