I'm not sure I understand that quite correct, where is this problem appearing?

Other things:

```
tail is used in line 230: tail -r ${_fstab} | while read _device
    _mountpt _rest; do
```

If the per-jail fstab is larger than 10 lines, which is the default of tail to show, the remaining mountpoints will not be unmounted?

The default for the -r option is to display all of the input.

Ah, didn't know that. Thanks for correcting me there.

greetings,  
philipp
