This possible worm outbreak warning was received on TH-Research (The Trojan Horses Research Mailing List) from Moosoft Development (www.moosoft.com) a few hours ago.

AV and AT firms have had a few hours to update their databases.

Info can be found only on Kaspersky's web page, so far:

<http://www.viruslist.com/eng/alert.html?id=783050>

Let's hope it is stopped before it can do too much damage!

This email comes and an heads-up and FYI so you can take measures to stop it.
