Fedora Legacy Update Advisory

Synopsis: Updated mozilla packages fix security issues

Advisory ID: FLSA:158149

Issue date: 2005-07-15

Product: Red Hat Linux, Fedora Core

Keywords: Bugfix

CVE Names: CAN-2005-1476 CAN-2005-1477 CAN-2005-1531
CAN-2005-1532

1. Topic:

Updated mozilla packages that fix various security bugs are now available.

Mozilla is an open source Web browser, advanced email and newsgroup client, IRC chat client, and HTML editor.

2. Relevant releases/architectures:

Red Hat Linux 7.3 – i386

Red Hat Linux 9 – i386

Fedora Core 1 – i386

Fedora Core 2 – i386

3. Problem description:

Several bugs were found in the way Mozilla executes javascript code. Javascript executed from a web page should run with a restricted access level, preventing dangerous actions. It is possible that a malicious web

Full-Disclosure: [Full-disclosure] [FLSA-2005:158149] Updated mozilla packages fix security issues

page could execute javascript code with elevated privileges, allowing access to protected data and functions. The Common Vulnerabilities and Exposures project (cve.mitre.org) has assigned the names CAN-2005-1476, CAN-2005-1477, CAN-2005-1531, and CAN-2005-1532 to these issues.

Users of Mozilla are advised to upgrade to this updated package, which contains Mozilla version 1.7.8 to correct these issues.

4. Solution:

Before applying this update, make sure all previously released errata relevant to your system have been applied.

To update all RPMs for your particular architecture, run:

```
rpm -Fvh [filenames]
```

where [filenames] is a list of the RPMs you wish to upgrade. Only those RPMs which are currently installed will be updated. Those RPMs which are not installed but included in the list will not be updated. Note that you can also use wildcards (*.rpm) if your current directory *only* contains the desired RPMs.

Please note that this update is also available via yum and apt. Many people find this an easier way to apply updates. To use yum issue:

```
yum update
```

or to use apt:

```
apt-get update; apt-get upgrade
```

This will start an interactive process that will result in the appropriate RPMs being upgraded on your system. This assumes that you have yum or apt-get configured for obtaining Fedora Legacy content. Please visit <http://www.fedoralegacy.org/docs> for directions on how to configure yum and apt-get.

5. Bug IDs fixed:

These packages are GPG signed by Fedora Legacy for security. Our key is available from <http://www.fedoralegacy.org/about/security.php>

You can verify each package with the following command:

```
rpm --checksig -v <filename>
```

If you only wish to verify that each package has not been corrupted or tampered with, examine only the sha1sum with the following command:

```
sha1sum <filename>
```
