Security update for Windows Vector Markup Language (VML) vulnerability has been released.

Fix is available via Microsoft Update or downloadable with links included to MS06-055:
<http://www.microsoft.com/technet/security/bulletin/ms06-055.msp>

Fix information has been added to Windows VML Vulnerability FAQ (CVE-2006-4868)
<http://blogs.securiteam.com/?p=640>

and details will be added shortly.

It appears that the timestamp of updated Vgx.dll library is 18th September, 2006.

From the Security Update Information / File Information section of new MS bulletin:

Windows XP Service Pack 2 (all versions) and Windows XP Professional x64
Vgx.dll - 6.0.2900.2997 - 18-Sep-2006 - 14:28 (UTC) - 851,968

It is exactly the same day when Sunbelt reported that they were informed Microsoft security people:
