Debian Security Advisory DSA 1269-1 security@xxxxxxxxxxxx
<http://www.debian.org/security/> Martin Schulze
March 18th, 2007 <http://www.debian.org/security/faq>

Package : lookup-el
Vulnerability : insecure temporary file
Problem type : local
Debian-specific: no
CVE ID : CVE-2007-0237

Tatsuya Kinoshita discovered that Lookup, a search interface to electronic dictionaries on emacs, creates a temporary file in an insecure fashion when the ndeb-binary feature is used, which allows a local attacker to craft a symlink attack to overwrite arbitrary files.

For the stable distribution (sarge) this problem has been fixed in version 1.4-3sarge1.

For the testing distribution (etch) this problem has been fixed in version 1.4-5.

For the unstable distribution (sid) this problem has been fixed in version 1.4-5.

We recommend that you upgrade your lookup-el package.

Upgrade Instructions

```
wget url  
will fetch the file for you  
dpkg -i file.deb
```

[Full-disclosure] [SECURITY] [DSA 1269-1] New lookup-el packages fix insecure temporary file will install the referenced file.

If you are using the apt-get package manager, use the line for sources.list as given at the end of this advisory:

```
apt-get update
will update the internal database
apt-get upgrade
will install corrected packages
```

You may use an automated update by adding the resources from the footer to the proper configuration.

Debian GNU/Linux 3.1 alias sarge
