To: [NTBUGTRAO@LISTSERV.NTBUGTRAO.COM](mailto:NTBUGTRAO@LISTSERV.NTBUGTRAO.COM)

Just a quick heads-up. The NT4 SRP (Q299444) breaks the firewall component of NetworkIce's BlackIce Server Agent and portions of the Agent handling systems in the IceCap agent management software. This applies to version 2.5eq. Previous versions are assumably effected as well.

Network Ice has provided patches for the effected applications, available for download at <http://www.networkice.com/downloads/index.html> with a current S/N.
