Dear Nick Staff,

−−Wednesday, May 14, 2003, 9:09:15 PM, you wrote to NTBUGTRAQ@LISTSERV.NTBUGTRAQ.COM:

NS> an ISP. By default these settings are not locked to standard users
NS> because the configuration file responsible for holding these
NS> settings (vpnclient.ini) is installed to a non−restricted path
NS> (systemdrive%\program files\CiscoVPN).

Default settings of Windows 2000 and above (and recommended settings for Windows NT) limit access to Program Files for users to "Read". If your users are included in "Power Users" group, you have huge security problem unrelated to Cisco software.
