The Organization for Internet Safety is pleased to announce the beginning of the public comment period for the Draft Security Vulnerability Reporting and Responding Process. This draft process is the result of a lengthy collaboration between leading security researchers and software vendors. We have worked hard to develop a process that addresses the needs of both security researchers and software vendors, and provides a framework for achieving our shared objective of improving security for computer users, the Internet, and the critical infrastructures that depend on it. We welcome your comments on the draft. Please read the draft and find instructions on submitting comments at http://www.oisafety.org/.

The period for comments will close on 7 July, 2003. The final process document will be released at the Black Hat Briefings (www.blackhat.com) in Las Vegas from 28−30 July, 2003.
