Fish,

The key is correct but the signature is incorrect. The copy PSIRT received has a good signature, but by the time it made it to the ntbugtraq alias spaces were added in the text. I'll work on this with the list admin and the diffs file and see if we can figure out what happened. In the meantime, please refer to the web posting <http://www.cisco.com/warp/public/707/cisco-sa-20031210-unity.shtml> until we can get you a signed copy.
