Do you know if Outlook uses the GDI from Office or from IE? We can easily deploy the OS and the IE versions of the patch but deploying an Office patch is difficult in our environment (long story). I know that Outlook often uses the IE engine for processing html messages. So would patching IE protect Outlook?

Thanks!

– Kurt

Want to reply to the person who sent this message? This list is configured such that just hitting reply is going to result in the message coming to the list, not to the individual who sent the message. This was done to help reduce the number of Out of Office messages posters received. So if you want to send a reply just to the poster, you'll have to copy their email address out of the message and place it in your TO: field.
