NetOp School Admin Vulnerability (Authorization Bypass)

SUMMARY

Feature-rich <<http://www.crossteccorp.com/netopschool/index.html>> NetOp School puts teachers and corporate trainers center stage in networked classrooms or Internet-based virtual classrooms. A security vulnerability in the product allows local unprivileged users to gain administrative access of the NetOp product.

DETAILS

Vulnerable systems:

NetOp School version 1.5

By default when a user logs into a workstation the student version of NetOp is run. If a user (student) attempts to execute the admin version of NetOp then the required password dialog will appear and the user will need to know that password if they wish to run the program. The flaw is in the way the program reacts when the student version is not running. For example, a student can use any type of task manager to kill the student version and when he or she goes to open the admin version all security

Securiteam: [NT] NetOp School Admin Vulnerability (Authorizatio

checks and password dialogs are bypassed.

This gives the student or non-authorized user full access to any workstation logged in to the network. It also allows users to "spy" on anybody in the network.
