Norton Antivirus Content Filter and Virus Protection Can By Passed

SUMMARY

Due to a vulnerability in NAV attackers can bypass its content filtering and virus protection. This could prove dangerous since it allows malicious content to go through the protection mechanism untouched.

DETAILS

Due to a case sensitivity problem of the Content-Type and Content-Disposition allows attackers to cause NAV to incorrectly not detect a message's attachments.

Example:

CONTENT-type: text/plain;

Name="eicar.com"

ADDITIONAL INFORMATION

The information has been provided by <<mailto:3APA3A@SECURITY.NNOV.RU>>
3APA3A.
