The following security advisory is sent to the securiteam mailing list, and can be found at the SecuriTeam web site: <http://www.securiteam.com>

-- promotion

When was the last time you checked your server's security?

How about a monthly report?

<http://www.AutomatedScanning.com> -- Know that you're safe.

-----

Resin DOS device Denial of Service

---

## SUMMARY

It is possible for a malicious user to cause a Denial of Service by requesting certain malformed URLs from the Resin web server.

## DETAILS

Vulnerable systems:

- \* Resin 2.1.1 standalone on Windows 2000 Server

Immune systems:

- \* Resin 2.1.2 standalone on Windows 2000 Server

Requesting the DOS device "con" with a registered extension (e.g. .JSP or XTP) will tie up a working thread. If a malicious user requests about 150 of these, the web server will no longer service http requests.

Vendor Response:

This was reported to the vendor on the 23rd of May, 2002. On the 28th of May, 2002 the vendor released a new snapshot (beta) that corrected the issue. On the 11th of June, 2002 the vendor released a new version that corrects the issue.

Securiteam: [NT] Resin DOS device Denial of Service

Corrective action:

Upgrade to version 2.1.2 available from:

<<http://www.caucho.com/download/>> <http://www.caucho.com/download/>

ADDITIONAL INFORMATION

The information has been provided by <<mailto:pgrundl@kpmg.dk>> Peter  
Gründl.
