Jigsaw Webserver Path Disclosure

SUMMARY

<<http://www.w3.org>> Jigsaw is W3C's leading-edge Web server platform, providing a sample HTTP 1.1 implementation and a variety of other features on top of an advanced architecture implemented in Java. It is possible to disclose the physical path to the web root. This information could be useful to a malicious user wishing to gain illegal access to resources on the server.

DETAILS

Vulnerable systems:

- * Jigsaw version 2.2.1 Distribution on Windows 2000 Server

Immune systems:

- * Jigsaw version 2.2.1 Dev/2.2/20020711 on Windows 2000 Server

Requesting /aux two times, results in an error message, after second request, containing the physical path to the web root.

Vendor response:

The vendor was notified on 27 May 2002. On 11 July 2002, we verified that the issue was corrected in the latest build (20020708).

Securiteam: [NT] Jigsaw Webserver Path Disclosure

Corrective action:

Upgrade your Jigsaw.jar to the latest build, available from:

<<http://jigsaw.w3.org/Devel/classes-2.2/20020711/>>

<http://jigsaw.w3.org/Devel/classes-2.2/20020711/>

ADDITIONAL INFORMATION

The information has been provided by <<mailto:pgrundl@kpmg.dk>> Peter Gründl.
