ClickCartPro Security Vulnerability (Misconfiguration)

SUMMARY

<<http://www.clickcartpro.com/>> ClickCartPro is a complete e-commerce solution. Manage a store with products for sale. Features include categories, specials, shipping flexibility, admin statistics, order tracking, discounts, a mail list program, file upload utilities, a banner ad rotation program, multiple product options, and relationships, more. A security vulnerability has been found in several configurations under the Windows operating system due to a misconfiguration issue.

DETAILS

Vulnerable systems:

* ClickCartPro version 4.0

Example:

Accessing the following URL will allow access to the user's database:

http://site/data/site/admin_user.db

http://site/cp/data/site/admin_user.db

http://site/data/cp/site/admin_user.db

Securiteam: [NEWS] ClickCartPro Security Vulnerability (Misconfiguration)

The admin_user file contains the username and password of the webmaster and administrator of the site.

Vendor response:

From the README:

Protecting the files in the data directory is of the highest importance. Owners who will be running this package on Apache web server with htaccess file protection enabled can place this directory in the same location as the web accessible portion of their site. .htaccess files are provided with the directory to ensure browsing via the web will not be allowed. For those owners with Windows servers or for those not running Apache web server, it is highly recommended that the data directory be stored in a non-web accessible portion of your account.

ADDITIONAL INFORMATION

The information has been provided by <mailto:du1tku@yahoo.com> Leo Siagian and <mailto:ec@kryptronic.com> Electronic Commerce Department – Kryptronic, Inc..
