A-CART Database Exposure

SUMMARY

<<http://www.alanward.net>> A-CART is an ASP shopping cart application written in VBScript. It is comprised of a number of ASP scripts and an Access database.

A security vulnerability in the product allows remote attackers to download the product's database, thus gain access to sensitive information about users of the product (name, surname, address, e-mail, credit card number, and user's login-password).

DETAILS

Problem:

Accessing the following URL will return the database used by the product:

http://acart.url/acart2_0/acart2_0.mdb

Solutions:

Once you have created the DSN, you need to tell A-CART its name. This can be done by editing the line in db.asp, which says:

```
strConn = "acart2_0"
```

Change "acart2_0" to the name of the DSN you have created.
