Web Shell (WSH), Remote UNIX/WIN Shell

---

## DETAILS

Wsh, "Web Shell" – is a remote UNIX/WIN shell that works via HTTP/HTTPS.

The package contains two perl scripts for server and client hosts: the first one is for console usage and the second one runs as CGI script on the target host.

Example:

The key Web Shell features: SSL support (\*), command line history support (\*), file upload/download, protect server part script usage with secret key inside HTTP message, data flow XOR encoding, can work through HTTP proxy server (to hide client ip or bypass firewall).

(\* – Additional packages are required on the client host
