NetPipe, a Socket Redirector

DETAILS

NetPipe is a redirector. It takes a socket in on one port, and reconnects that data out on the second port. It is multi-threaded, and supports UDP, TCP, and ICMP. It is a fully functioning socket redirector, the aim of which is to open ports on a firewall without needing access to manipulate firewall's ACLs.

ADDITIONAL INFORMATION

The tool can be downloaded from:

<<http://aconole.brad-x.com/programs/>> <http://aconole.brad-x.com/programs/>

The information has been provided by ">Aaron Conole.
