P.A.T.H. Perl Advanced TCP Hijacking

---

## DETAILS

The <http://p-a-t-h.sourceforge.net/html/index.php> P.A.T.H. project is a collection of hijacking tools written in Perl. There is a terminal and a GUI version (programmed with Perl/TK) for each tool. This suite of tools allows for the testing of firewall and IDS rules, sniffing your network traffic, and injection of resets to block unwanted traffic in your internal network.

## ADDITIONAL INFORMATION

The tool can be downloaded from:

<http://p-a-t-h.sourceforge.net/html/index.php>

<http://p-a-t-h.sourceforge.net/html/index.php>

The information has been provided by [bytebeater@crazydj.de](mailto:bytebeater@crazydj.de)

Bastian Ballmann, and [stefan@krecher.de](mailto:stefan@krecher.de) Stefan Krecher.
