-----  
IIS Executes Files by Default Whenever They Reside Under an ".asp" Directory

---

## SUMMARY

When a directory is named like an ASP file, the ASP engine will try parse any file that resides under it, no matter what extension that file has.

This may be dangerous when users are able to create directories and upload images into them. As a malicious user, could upload an ASP script with the extension of an image and then run it.

## DETAILS

Exploit:

Create the directory "test.asp" in your web root and place the following file in it:

-- exploit.gif -----

Hello world, I'm an image!

---

Securiteam: [NT] IIS Executes Files by Default Whenever They Reside Under an ".asp" Directory

Open <http://localhost/test.asp/exploit.gif> in your browser and you should read the message.
