HostAdmin Path Disclosure

SUMMARY

<<http://dreamcost.com/?page=hostadmin>> HostAdmin is a "hosting automation application that is both simple to use and install, while remaining robust and affordable enough for any startup to medium sized business". A vulnerability in the product allows remote attackers to cause the product to reveal the true path under which the product is installed.

DETAILS

It's possible to make a malformed http request in HostAdmin and in doing so trigger an error. The resulting error message will disclose potentially sensitive installation path information to the remote attacker.

Example:

Sending the following:

<http://www.site.com/pathofhostadmin/?page='>

Will result in something similar to:

Securiteam: [UNIX] HostAdmin Path Disclosure

Warning: fopen("member_\.html", "r") – No such file or directory in
/home/virtual/site1/fst/var/www/html/template_2.html on line 91
Sorry, the page you tried to access could not be found on the server

Solution:

The vendor has been contacted. No patch is available at this time.

ADDITIONAL INFORMATION

The information has been provided by <mailto:G00db0y@eforu.com> G00db0y
xxx.
