In Depth Analysis of DDoS

SUMMARY

"Distributed Denial of Service Attacks have recently emerged as one of the most newsworthy, if not the greatest, weaknesses of the Internet. Overview Distributed Denial of Service (DDoS) attacks are a relatively new development; reports of the first DDoS attacks surfaced in mid-1999, with the highest-profile attacks coming in early 2000 against sites like Amazon.com, CNN.com, eBay and E-Trade. Clearly, the challenge these attacks present is a serious one. While you alone cannot do much to protect yourself, as a community we can improve the situation. The victims were unreachable for several hours each".

DETAILS

The paper explains what DDoS attacks are and lists some of the most common tools attackers use. It then follows on to explain the reasons why ever more frequently are DDoS attacks being carried out and the risks involved in such attack.
