NuFW – Per–User Based Packet Filter

---

## DETAILS

<<http://www.nufw.org/>> NuFW is a set of daemons that filters packets on a per–user basis. The gateway authorizes a packet depending on which remote user has sent it. On the client side, users have to run a client that sends authentication packets to the gateway. On the server side, the gateway associates user ids to packets, thus enabling the possibility to filter packets on a user basis. Furthermore, the server architecture has been built to use external authentication source such as an LDAP server.

## ADDITIONAL INFORMATION

The tool can be downloaded from: <<http://www.nufw.org/>>  
<http://www.nufw.org/>.

The information has been provided by <<mailto:eric@regit.org>> regit.
